Description

Alligare Diquat Herbicide, manufactured by Alligare, is an effective post-emergent herbicide that controls weeds on dry land and aquatic sites.

The active ingredient Diquat Dibromide, 37.3%, can control submerged growing weeds, subsurface growing weeds, and weeds growing on the bottom of bodies of water. It can also control weeds on land, such as pastures, along fence lines.

Alligare Diquat Herbicide is a highly active aquatic and land herbicide, which means it can control a broad spectrum of weeds at rates as low as 0.75 fl. oz. per 1,000 sq. ft., making it an economical product.

Tools Needed

To use Alligare Diquat, you will need a handheld pump sprayer, backpack sprayer, or skid sprayer. For effective applications, we suggest a sprayer with an adjustable tip nozzle.
